

March 2017

SEASONAL INFO: Mid to late summer is the time to observe parasite risk (Barber's Pole worm, fly, tick) in areas where these are an issue, and is also the time to start planning for the pre-lambing and pre-calving season for those regions that lamb/calve in autumn. Due to the recent warm, moist conditions, an increase in Barber's Pole infections has been seen in sheep.

- Doing some Worm Egg Counts on a sample of sheep will help producers to know if a second summer drench is needed. If a drench is required, triple combination drenches such as TRIGUARD are an effective method in combatting parasites.

Check out our September Newsletter for information on Worm Egg counts! Call in and see us at 11 Kirkcaldy St or phone us on 6332 4044 for more information.

Gallagher fencing now has a 3 year warranty on their range of Energizers, come in today to take advantage of this great offer
