Good agricultural practice is essential for optimal blowfly strike prevention

CLiK Extra Spray-On contains 65 g/L dicyclanil and provides up to 29 weeks protection from blowfly strike. Meat WHP 21 days. Wool WHP 3 months. CLiK Spray-On contains 50 g/L dicyclanil and provides 18–24 weeks protection from blowfly strike. Meat WHP 28 days. Wool WHP 3 months.

CLiK™ Extra protects against blowfly strike for up to 29 weeks, as well as protecting mulesing and marking wounds.

Sudden drop in feed quality across New South Wales and South East Queensland

Aaron Kemp, AusWest Seeds, New England and Mid North Coast NSW Territory Manager

Low stock numbers across New South Wales and South East Queensland as well as a strong spring and relatively mild summer has enabled many graziers to cruise through autumn on green sub-tropical (or C4) grasses. With everyone now having had a taste of winter, in a lot of cases, while the quantity remains, the quality is gone. Frosted off sub-tropical grasses do not contain enough energy and protein to keep stock gaining weight. The high ground covers in some areas has also inhibited sub clover germination. In a lot of C4 and phalaris based systems, it is the sub clover that provides protein at this time of year, allowing stock to utilise the poor-quality carry over feed whilst still achieving moderate weight gains. Without suitable supplement, stock on poor quality frosted feed will likely go backwards. Below are some of the common questions we get asked when this situation occurs.

What can we do now? Winter is well upon us and for many areas whatever is sown now will be slow. The best option for the immediate future is to supplement her diet with protein and energy. There are multiple supplements available, call Town and Country Rural Supplies to work out what is right for you. For more info visit <https://www.ausweststephenseeds.com.au/pages/newsletter/2021>

BLOAT - DRENCH is ready for use; as an oral drench for individual cattle, for mixing with molasses in bail feeding and to be metered into drinking troughs or drum rollersis ready to use as a drench and requires no further dilution or mixing. Drenching individual animals with 21 mls of BLOAT - DRENCH twice daily will prevent bloat.. Call our team today to find out more.

ORAL BLOAT CONTROL

Gallagher Permanent Electric Fencing Solutions

Safely contain your stock and exclude feral animals on your property.

Gallagher Permanent Electric Fencing solutions have been designed for the construction of a robust, low-maintenance and permanent electric fencing solution. Gallagher Westonfence is made in Australia from 90% recycled materials (including chemical containers recycled as part of the national drumMUSTER program) and is suitable for exclusion, internal and retrofit/offset applications.

Permanent exclusion fencing solutions are ideal for the exclusion of wild dogs, foxes, kangaroos, pigs and deer. Unlike legacy fencing solutions like prefabricated mesh, fence performance is instantly communicated directly to your smartphone - offering you the peace of mind that your valuable livestock are where they should be or that they are safe from predators.

Internal fencing solutions are ideal for containing cattle, sheep, goats, horses and other domestic animals. Simple installation and low-maintenance makes a Gallagher Permanent Electric Fence ideal for enabling more productive farming through better pasture management and regenerative activity through improved soil health. For more information visit <https://www.gallagherproducts.com/au/westonfence>

MONITOR YOUR WATER REMOTELY WITH FARMBOT

Farmbot Water Level Sensor

Water Level Sensor connects to the Farmbot Monitor to provide remote water level monitoring for tanks or dams. This combination allows reporting of real-time issues, events & abnormalities in your water system. For more info visit www.farmbot.com.au

Works
Anywhere

Save time on fuel
and labour costs

Easy
installation

Built from corrosion
resistant materials

Detect leaks and faults in real-time

Bushmans Winter Cash Back Promotion 2021

When you purchase a Bushmans tank during the Bushmans Winter Cash Back Promotion 2021 between 1st July until 31st August 2021 Bushmans rewards their customer when they purchase a Bushmans tank and participate in the promotion! For more information visit <https://www.bushmantanks.com.au/promotion/>

BEEFMASTER - Grass Tetany Block

Grass Tetany (cattle), grass staggers (sheep) and hypomagnesaemia are names given to a condition that can effect stock in late autumn, winter and spring. It can cause significant losses in production, even when there are no signs of illness. Grass tetany or grass staggers occurs when animals are grazing pasture which has low available levels of magnesium, or as a result of increased body demands for magnesium during lactation or late pregnancy
